

Assignment – Login Page Development

Module: Web Development / UI Engineering

Assignment Description

Students are required to design and develop a functional and visually appealing login page for a web or mobile application. The assignment evaluates understanding of HTML structure, CSS styling, form handling, validation, usability principles, and clean coding practices.

What Is Expected from Students

- Design a professional and user-friendly login interface.
- Include essential form fields such as username/email and password.
- Implement proper form validation (required fields, input format validation).
- Ensure password field security practices (e.g., masked input).
- Apply consistent styling using external CSS.
- Maintain proper alignment, spacing, and typography.
- Ensure responsive design for different screen sizes.
- Provide clear error messages and user feedback.
- Organize files properly (HTML, CSS, optional JavaScript).
- Write clean, readable, and well-indented code.

Rules and Submission Guidelines

- Use only HTML, CSS, and basic JavaScript (no frameworks unless specified).
- Do not copy full templates from the internet.
- Follow proper naming conventions for files and folders.
- Ensure the page works correctly in modern web browsers.
- Submit the project in the required format (ZIP folder or as instructed).
- Late submissions may be penalized according to module policy.

Evaluation Criteria

- User interface design quality.
- Form validation accuracy and functionality.
- Responsiveness and usability.
- Code structure and cleanliness.
- Overall presentation and professionalism.
